## Tor Coatings

GETTING THE JOB RIGHT FIRST TIME, EVERY TIME

SUSTAINABILITY

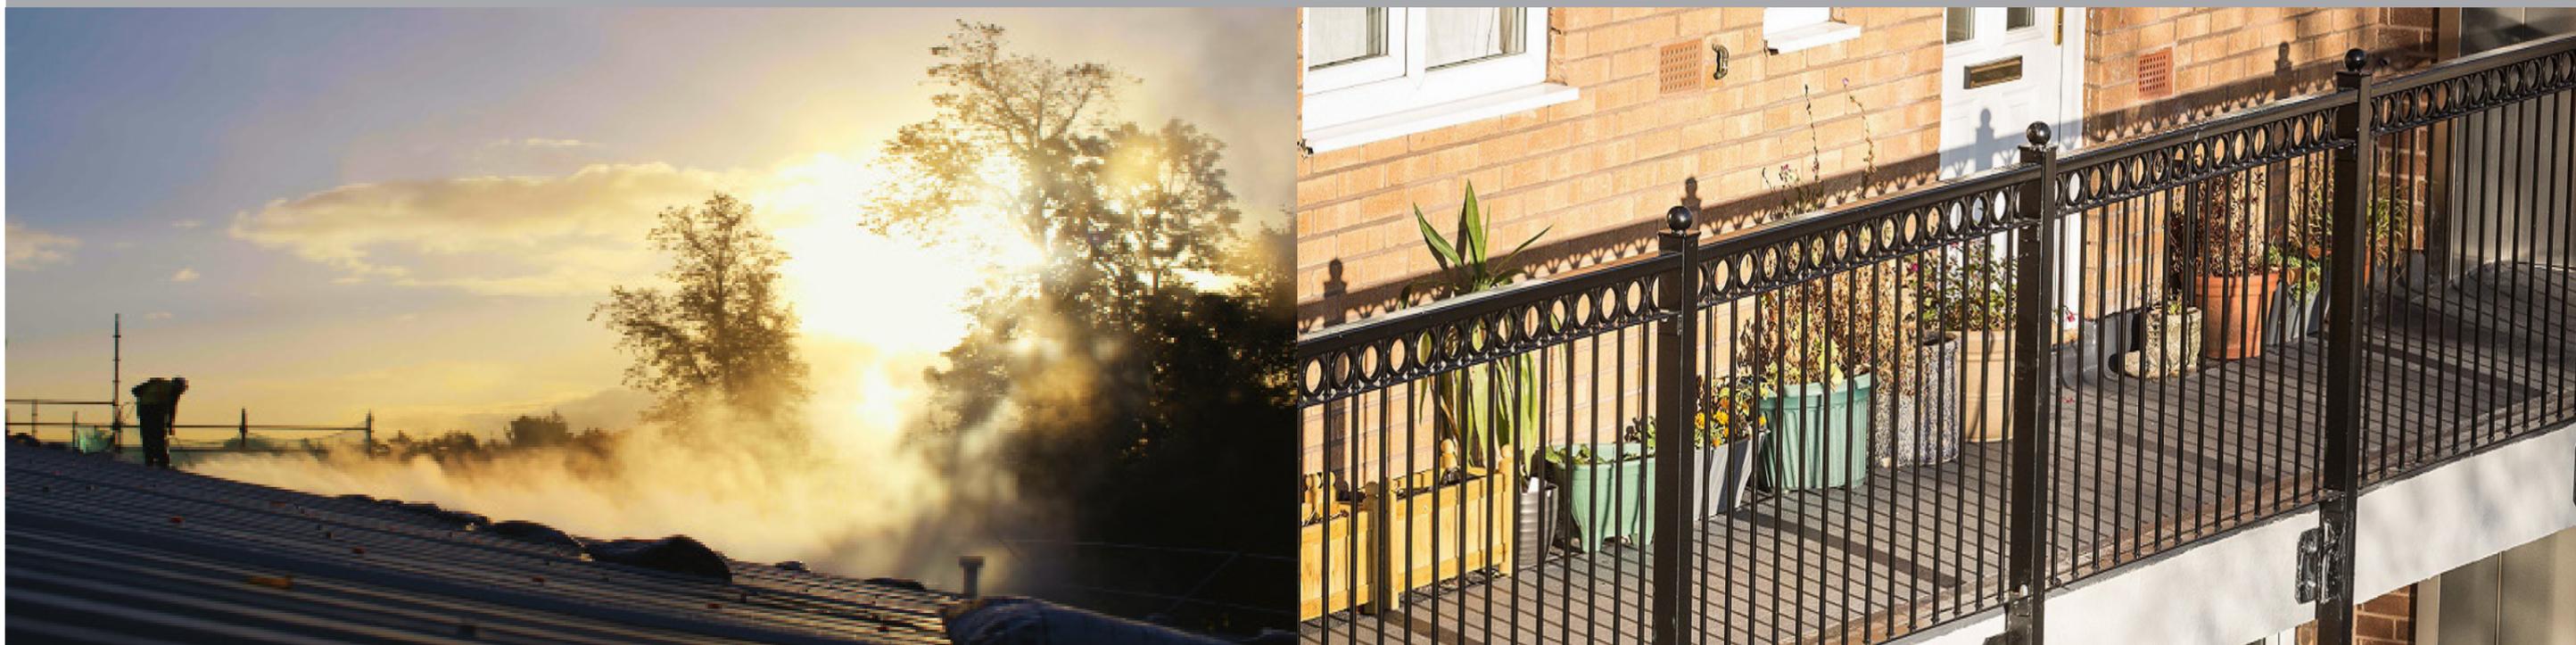

THE NATURAL CHOICE FOR REFURBISHMENT COATINGS.

TOTAL BUILDING PROTECTION.

# Tor Coatings

SUSTAINABILITY AND ENVIRONMENTAL AWARENESS

## Tor's promise

We invest in research and development, employing some of the best chemists in the sector and allowing us to provide increased value for the economy and industry. We promote a long-term approach to success and an environment of continuous improvement.

We use energy responsibly and are increasing our energy efficiency through a carefully selected plan, allowing us the ISO 14001:2015 accreditation. Where it makes good economic sense, we invest in modern, energy efficient technologies, which includes our upcoming new aerosol production line and our move to a purpose-built, maximum efficiency distribution centre facility.

Our products help our customers to achieve their sustainability targets as well. When developing our refurbishment systems, we took energy saving into consideration and the reduction of environmental pollution during manufacture and throughout the entire product life cycle.

## The products

High-performance roofing systems can make a major contribution to sustainable construction and refurbishment projects. Both production and easy maintenance have significant influence on the overall sustainability performance of waterproofing applications. Tor's Elastaseal Warm roofing system can save energy by incorporating high-performance thermal insulation. The inclusion of which provides U-Value improvements to meet Building Regulations (part L). All systems allow the serviceable life of existing roofs to be extended by being manufactured for application over existing substrates in varying conditions, negating the requirement for removal and disposal. The development of zero solvent odour options for both our roofing and balcony systems demonstrates our commitment to consistently improve our response to the ever-changing aspects of sustainability and environmental protection.

## The staff

The health and safety of our staff and partner contractors is very important to us. We set the highest standards for the safety of our products, carry out extensive training with those installing our systems and empower our customers with the knowledge they need to adhere to environmental standards. We also inform customers of the risks associated with the use of all Tor products.

We inform all of our staff about sustainability measures and energy-related matters, motivating them to be responsible and mindful, both inside work and outside of work, nurturing awareness for the future of our environment.

We provide various models of working hours where possible in operational terms, and this supports the commitments of our staff whilst allowing us to run a 24 hour manufacturing facility. Our Core Values are a comprehensive document, shared with our staff from day 1, governing the behaviour of our employees. It is the duty of each and every member of staff to do their utmost in their role to help us adhere to our sustainability policy.

## Get more from Tor

At Tor we don't simply manufacture and market products, we offer tailored solutions to building-related problems. By being involved in the initial planning stages of a project, recommending a professional contractor, supplying our own technologies and overseeing the completion, we can deliver the perfect service, time and time again. We insist on monitoring the various stages of your installation to ensure compliance with the criteria of our single-point and insurance-backed guarantees. You can be safe in the knowledge that Tor Coatings will partner with contracting services whose customer service principles and values are aligned with our own, since the aim of the Partner Scheme is to provide effective, efficient, quality-assured product installation for all of our clients.
